

Scalability & Future Plan

Date 03 October 2026
Team ID COMICCRAFT-TEAM
Project Name ComicCrafter AI – AI-Powered Comic Strip Generator
Maximum Marks 1 Marks

Current System Limitations

S.No	Limitation	Impact	Priority to Address
1	Gemini and ClipDrop are external services.	Availability, quota and latency can affect generation.	High
2	Six image requests are performed sequentially.	Total generation time can grow with image-service latency.	High
3	Generated files are stored locally in PANEL_IMAGES/ and OUTPUT/.	Large-scale multi-user deployment needs managed storage and cleanup.	Medium
4	Prompt and panel consistency depends on generative-model output.	Unexpected model formatting can trigger parsing failures.	High
5	The supplied project is a local Streamlit application.	Production multi-user deployment requires deployment hardening and monitoring.	Medium

Future Enhancements

- Parallel or queued image generation to reduce total generation time.
- Cloud object storage for generated panels and final comics.
- Persistent project history so users can revisit and regenerate comics.
- Stronger structured-output validation for Gemini responses.
- Additional art styles and user-defined visual themes.
- Character consistency controls across all six panels.
- Production authentication, usage limits, logging and monitoring.
