

Define Problem Statements

Date 03 October 2026
Team ID COMICCRAFT-TEAM
Project Name ComicCrafter AI – AI-Powered Comic Strip Generator
Maximum Marks 3 Marks

Step 1: Problem Identification

S.No	Problem Statement	Affected Users	Impact
1	Creating a coherent comic from a short story normally requires manual scripting, panel planning, drawing and lettering.	Story writers, students, creators	High effort and slow production.
2	Text prompts alone do not automatically provide consistent six-panel visual storytelling.	Users creating short comics	Weak structure and inconsistent panel flow.
3	Generating artwork in different visual styles requires separate design skills and tools.	Beginner creators and educators	Higher learning curve and tool switching.
4	Adding dialogue, arranging panels and preparing a shareable output are repetitive manual tasks.	Comic creators	Time-consuming post-processing.

Step 2: Selected Problem

How can an AI-powered application convert a short story prompt into exactly six illustrated comic panels, add meaningful dialogue, support multiple art styles, combine the panels into a 3×2 comic strip, and provide a downloadable PDF?

Design Goal

ComicCrafter AI should minimize manual comic-production effort while keeping the workflow simple: enter a story, choose a style, generate structured panels, create images, assemble the strip and export it.
